

MIDAS: Modeling Ground-Truth Distributions with Dark Knowledge for Domain Generalized Stereo Matching

Peng Xu Zhiyu Xiang Jingyun Fu Tianyu Pu Hanzhi Zhong Eryun Liu
Zhejiang University

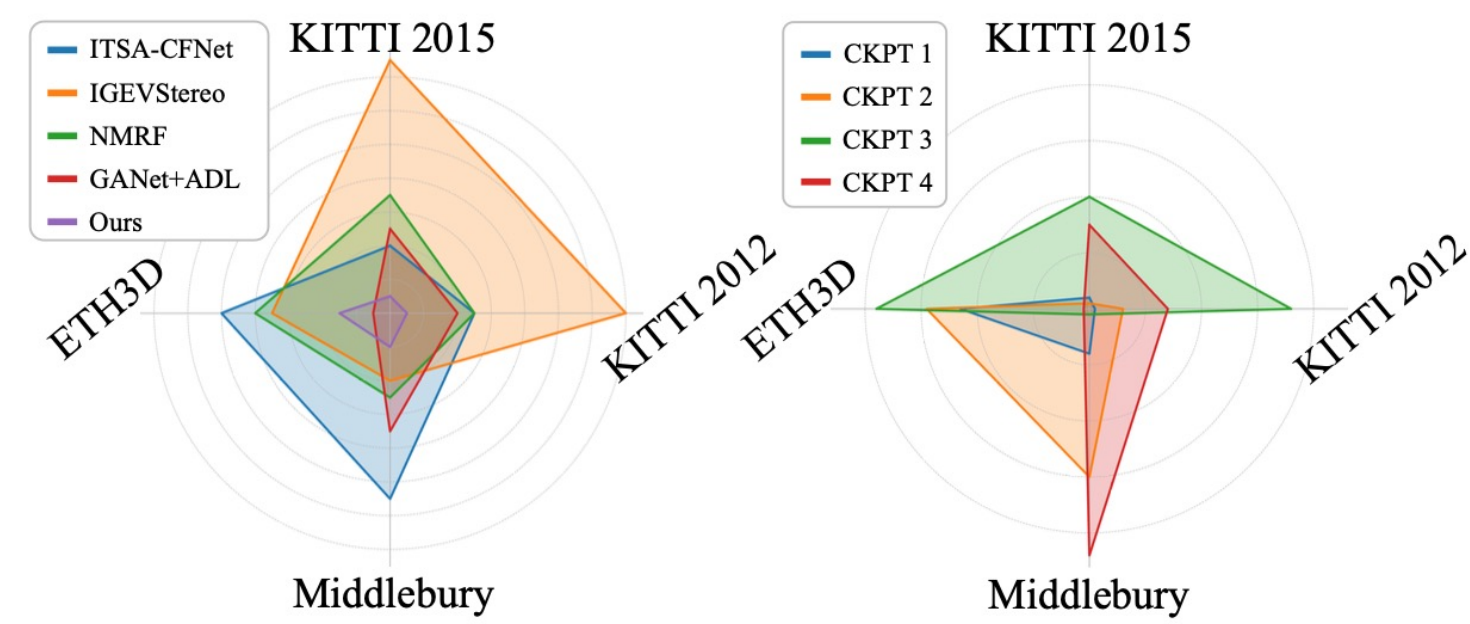

① Motivation

- Previous work modeled multi-modal ground truth for **edge pixels** with matching ambiguity.
- An elegant way to simultaneously model multi-modal distributions for other ambiguous regions, such as **repetitive textures and transparency**, is still missing.
- Stereo networks can **spontaneously** learn and output multi-modal distributions, implicitly capturing **similarity and uncertainty**.

② Challenges

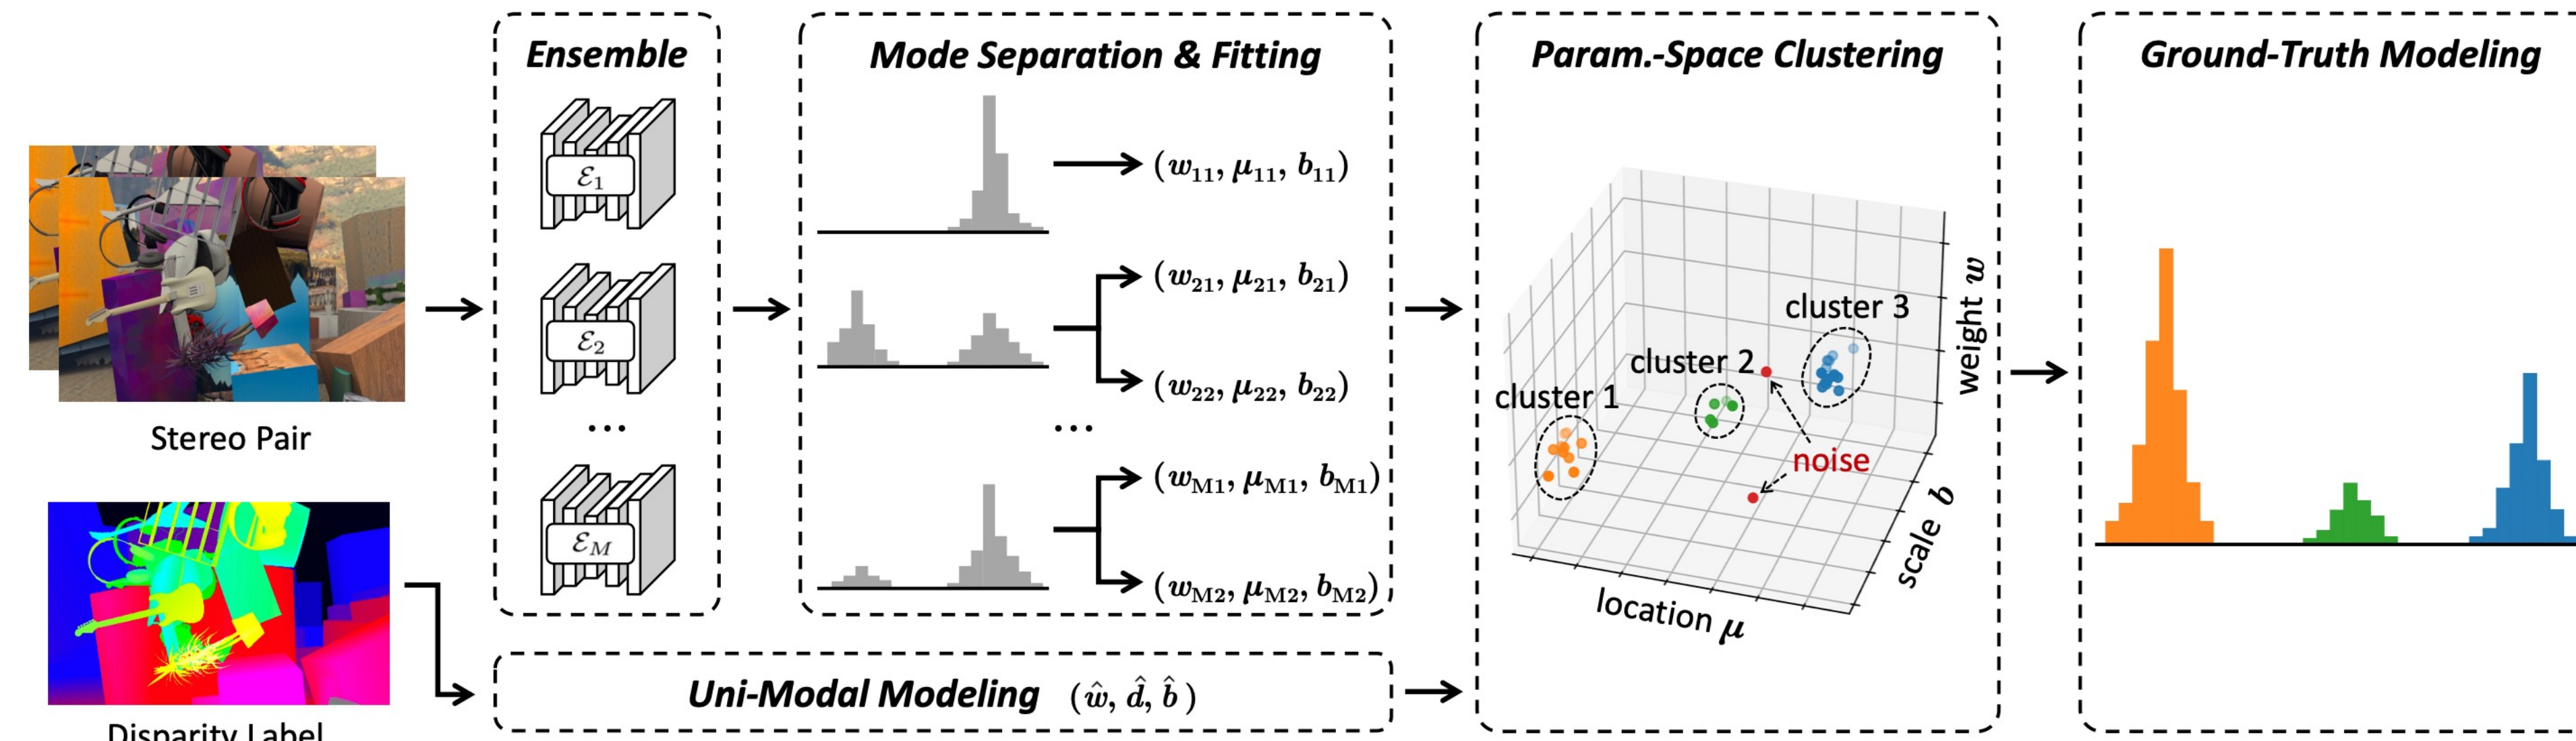

- Cross-domain preferences of different network architectures (left) and different checkpoints of the same network (right).

- Directly fusing the outputs of the network ensemble can disrupt the unimodal property of each mode.

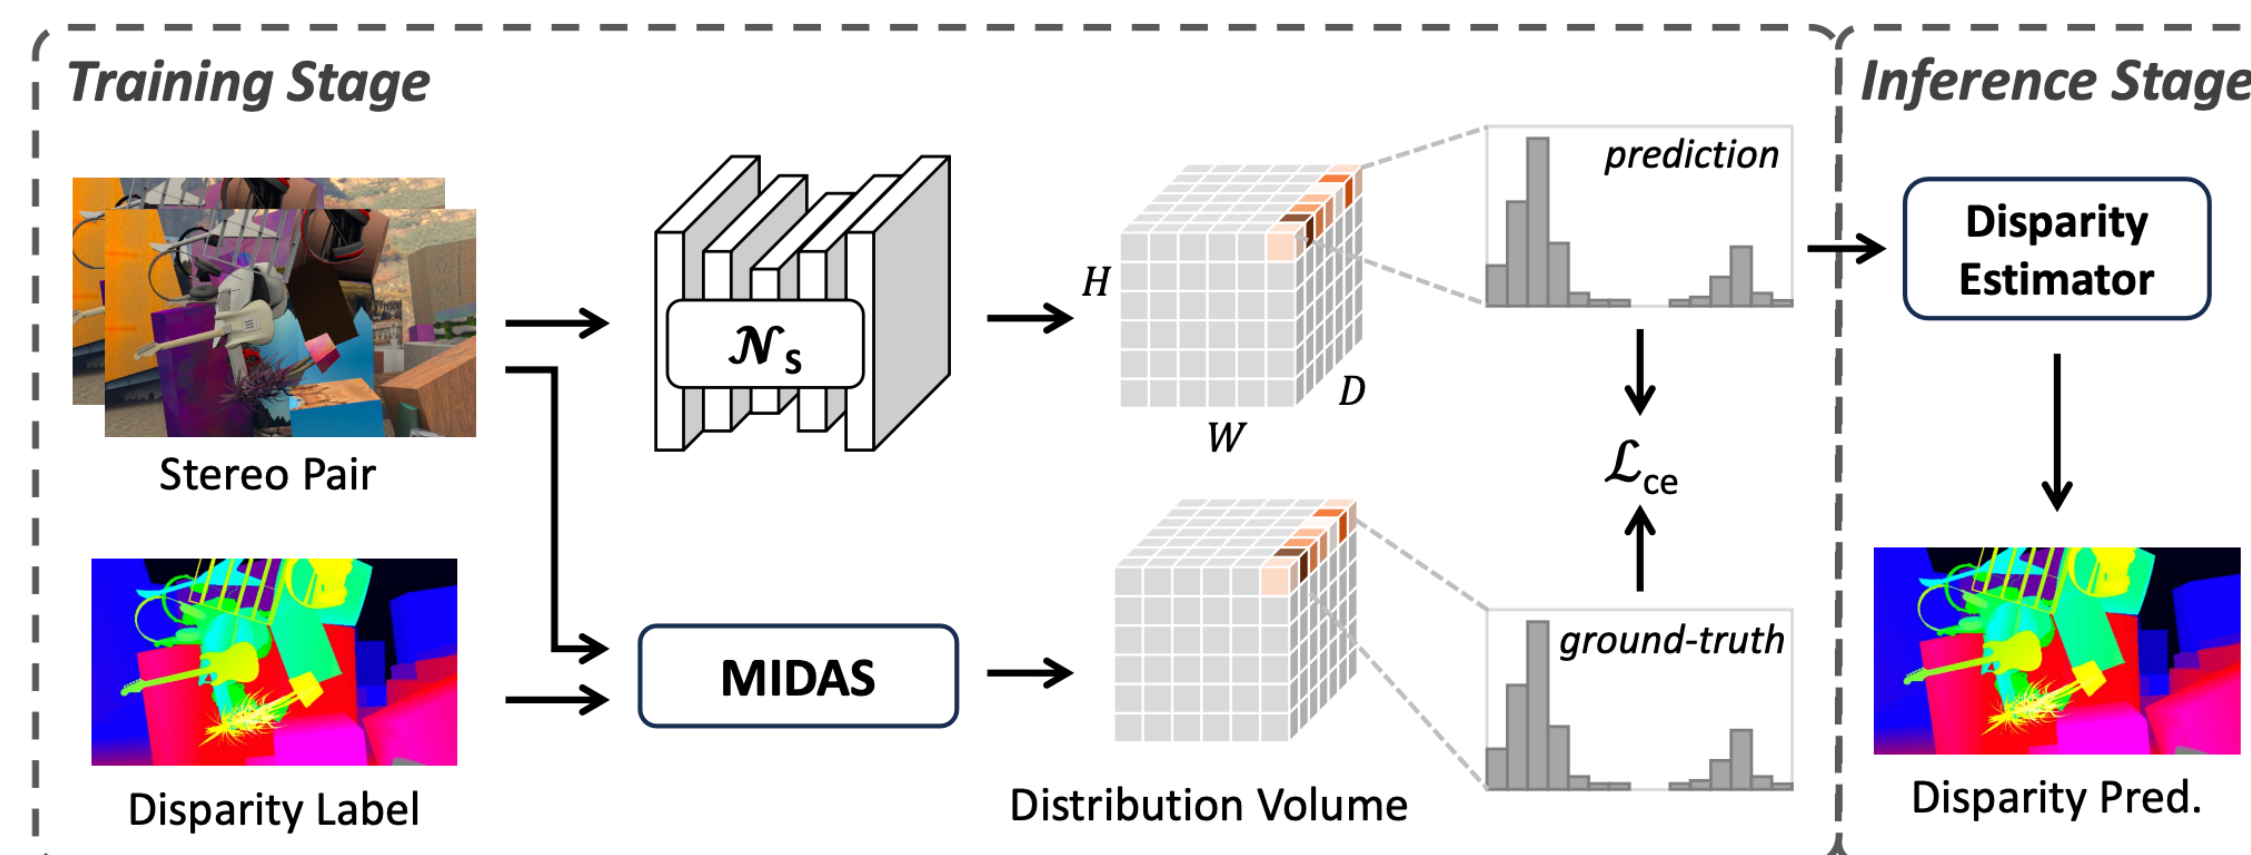

③ Ground-truth Distribution Modeling

- For each pixel, the network ensemble predicts M multi-modal probability distributions.
- Individual modes are separated from these distributions and fitted as **parameterized Laplacians** (w, μ, b) .
- The disparity label is also modeled as the uni-modal Laplacian with coordinate $(\hat{w}, \hat{\mu}, \hat{b})$.
- We cluster the points in the parameter space to distinguish the **objective knowledge** (effective clusters) from the **biased knowledge** (noise).
- The elements within each cluster are **fused** and **re-modeled** as a formulated mode in the final ground-truth distribution.

④ Overall Pipeline

⑤ Ablations

| #Arch. | #CKPT | KT15 | KT12 | MB | ETH3D |
|--------|-------|------|------|------|-------|

| 2 | 2 | 4.59 | 3.82 | 8.01 | 3.40 |
| 3 | 3 | 4.49 | 3.72 | 7.95 | 3.17 |

| Method | KT15 | KT12 | MB | ETH3D |
|-------------------|------|------|------|-------|
| PSMNet [2] + Ours | 4.49 | 3.72 | 7.95 | 3.17 |
| w/o BKF | 4.57 | 3.81 | 8.47 | 3.40 |

⑥ Quantitative Results

- Our method significantly enhances the backbone's performance and surpasses previous state-of-the-art methods.

⑦ Qualitative Results

- Our method demonstrates excellent reliability on weak textures, repetitive textures, object edges, and strong glare.
